alopel[®]

stops hair loss from the first applications

To treat alopecia, it is crucial to keep the hair and scalp in optimal condition, which involves proper hygiene to eliminate grease and dandruff (**Alopel[®] Shampoo**), as well as the application of nutrients that strengthen the follicle and keep the scalp healthy (**Alopel[®] Foam** and **Alopel[®] Capsules**).

The application of these 3 products (2 for topical use and 1 orally as a systemic treatment) represents an innovative comprehensive approach to combat androgenetic alopecia and areata, revitalizing the hair and scalp naturally, and reducing oxidative stress in the follicles.

The main cause of hair loss occurs when the enzyme 5 alpha-reductase converts testosterone into dihydrotestosterone (DHT), a hormone that especially affects the follicles of the crown, forehead and temples, causing their atrophy and reducing the growth cycle.

To stop hair loss, the Alopel[®] treatment focuses on 3 objectives:

1. Reduce the production of DHT,
2. Improve blood flow by reducing inflammation of the scalp,
3. Stimulate the quality of the epithelial sheath and the production of anchoring molecules.

SHAMPOO Formulated with a combination of ingredients that not only clean, but also nourish and strengthen hair, helping to prevent hair loss and promoting a healthy environment for hair growth. The biotin it contains helps strengthen hair and improve its growth. On the other hand, acetyl tetrapeptide-3 stimulates hair growth and hair density.

multiplies keratinocytes

FOAM Contains oleanolic acid (from the Lovely Hemsleya plant), biochanin A (from red clover), potent inhibitors of type I and II 5alpha-reductase. Apigenin, a citrus flavonoid, improves blood circulation in the hair follicle. Vitaminized matrikine improves the quality of the epithelial sheath and encourages the production of collagen and extracellular matrix proteins, which protects the follicle and improves hair anchorage. In addition, Biotinyl-GHK and Acetyl Tetrapeptide combat hair aging, keeping hair in the anagen phase, while Biochanin A reduces scalp inflammation by decreasing IL-8 production.

increases the amount of hair growing

CAPSULES They are formulated with a combination of ingredients that act synergistically to address hair loss from within. The inclusion of amino acids, vitamins, minerals and botanical extracts demonstrates a comprehensive approach to strengthening hair and promoting hair growth, while supporting overall scalp health.

How to apply Alopel[®]?

FOR TOPICAL USE

ORALLY

SHAMPOO
150 and 400 ml
containers

FOAM
100 and 200 ml
containers

CAPSULES
Containers
with 90 capsules

Wash your hair three times a week with Alopel[®] Shampoo: a first application to remove residue and dirt and then another to treat the hair, leaving it to act for a few minutes before rinsing. Remove excess water and apply Alopel[®] Foam with a gentle massage and comb. Complete the treatment by taking 1 Alopel[®] capsule every 12 hours. THE TREATMENT MUST BE CONTINUED FOR AT LEAST 3 MONTHS.
